

Use Case Template:

Template: Place Order

ID:	UC-01
Title:	Place Order
Description:	The customer selects food items from the menu, places an order, and receives order confirmation. The system processes the order and notifies the staff.
Primary Actor:	Customer
Secondary Actor:	Restaurant Management System (RMS), Staff
Preconditions:	The customer must have access to the menu, and the system must be online and functioning.
Postconditions:	The order is recorded in the system, a receipt is generated, and the staff is notified.
Dependency	Extended by "Make Payment"
Generalization	None
Main Success Scenario:	1. Customer browses the menu. 2. Customer selects food items. 3. Customer confirms the order. 4. The system records the order and generates an order ID. 5. The system notifies the staff about the order.
Extensions or Alternate Flow:	1a) If an item is out of stock, the system notifies the customer to choose an alternative. 3a)If the order is canceled before confirmation, no further processing occurs.
Frequency of Use:	Multiple times per day, depending on the number of customers.
Status:	Under Development
Project Team	Project Team
Priority:	High
