

ID:	UC-11
Title:	Process Payments
Description:	The system verifies, processes, and records payments made by customers.
Primary Actor:	RMS
Secondary Actor:	Payment Gateway
Preconditions:	Customer must initiate payment for an order.
Postconditions:	Payment is processed, and transaction details are stored.
Dependency	Extended by "Manage Orders" (UC-03)
Generalization	Parent of "Make Payment" (UC-02)
Main Success Scenario:	1. System receives payment request. 2. Payment gateway verifies details. 3. Payment is processed successfully. 4. System marks order as paid and generates a receipt.
Extensions or Alternate Flow:	2a. If payment fails, the system prompts the customer to retry.
Frequency of Use:	Every time an order is paid.
Status:	Under Development
Owner:	Project Team
Priority:	High
